

PONTIANAK PORT APPLY STID TRUCK & SIMON TKBM.

Admin -- 03 November 2022

Pontianak, 2 November 2022, PT Pelabuhan Indonesia (Persero) Regional 2 Pontianak as of 1 November 2022, began implementing the STID and SIMON TKBM program at Dwikora Port - Pontianak.

That the application of the STID and SIMON TKBM system is one of the platforms in the Stanas PK (National Strategy for Corruption Prevention) Program to encourage the acceleration of the implementation of Presidential Instruction No. 5 of 2020 concerning the National Arrangement of Ecosystem Logistics, as well as one of the transformations of port operations in Indonesia.

That the purpose of implementing STID at PT Pelabuhan Indonesia Regional 2 Pontianak, as an effort to unify the integrated system for truck identity, so that any truck fleet that enters the Dwikora Port - Pontianak must be sufficient to use 1 (one) card that can be used in all ports in Indonesia .

The application of this STID is considered very appropriate to be applied to control trucking companies and truck fleets operating in a roadworthy Pontianak Port environment supported by vehicle test permits and vehicle registration documents, considering that these trucking companies/truck fleets must be registered and registered in the PHINNISI Platform system.

With the implementation of this STID, the identity of trucks entering the terminal at Pontianak Port will be in a single database, making it easier to identify and monitor trucks operating at Dwikora Port - Pontianak
